WAVit is a revolutionary payment platform that allows dealers to eliminate their credit card processing fees forever!

HOW IT WORKS?

- Accepting credit cards in an “integrated” environment has finally arrived in the automotive industry! WAVit’s “Payment Choice App” automatically shifts the cost of processing credit card payments from the dealer to the end-user client – who now has the power to CHOOSE how they wish to pay!
- Order information is automatically sent from CDK’s system to WavIt: Repair Order (RO), Parts Order (PO), and/or other invoice numbers, as well as client names automatically load into the app – eliminating the potential for human error.
- Service advisors and/or cashiers simply tap the appropriate order and proceed with the payment options made available to the client.
- Notify your client that payments made with cash receive a cash discount. Other forms of payments are welcome yet do not receive the discount.
- There are no calculations that need to be done. The WAVit propriety software applies the standard adjustments. The integration is seamless and streamlines the accounting process for dealerships with a real time reporting dashboard.
- With Payment Choice, your non-credit users will no longer be subsidizing your credit users’ rewards.
